(Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI: Equal amounts of plasmid DNA from three normalized libraries (melanocyte ZNBHW, pregnant uterus NDHPU, and fetal heart NDHH19W) were mixed, and ss circles wer made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization as saccing and as tracer. The diriver was PCR-amplified cDNAs from pols of 5,000 clones made from the same 3 libraries. The pools of consisted of I.M.A.G.E. clones 260232-265223, and 484488 489479."

/note="Organ: 1909 | Vector: p1773D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NbHL19W, testis NHT, and B-cell NCI_CGAP_GCBI) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified CDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-302087, 682632-687239, 726408-72871, and 729096-731399. Subtraction by Bento

* NOTE: This is a 'working draft' sequence. It currently

* consists of 8 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N. but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.
                                                                                                                                                                                                                                                                  Vertebrata; Mammalia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              All repeats were identified using RepeatMasker: Smit, A.F.A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of 2024 bp in length f unknown length of Ils1 bp in length unknown length if Ils16 bp in length of 18546 bp in length

The New isolated haemopoietin receptor - used for developing products PT New isolated haemopoietin receptor - used for developing products PT for modulating proliferation, differentiation and survival of cells, Claim 8: Page 108-114; 182pp; English. CLAIM 8: Page 108-114; 182pp; English. CC The NR6 gene encodes a novel Haemopoietin receptor (HR). Interaction concerned the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's products can be used for modulating the activity of the receptors e.g. to requiate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in the products can also be used for detection and diagnosis, and survival. The products can also be used for detection and diagnosis, cells or cancers or predisposition to cancers, or for drug screening: Sequence 6663 BP; 1462 A; 1852 C; 1715 G; 1634 T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NR6 is a novel haemopoietin receptor (HR). Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for witro and in vivo. They can be present in therapeutics used for products can also be used for detection and adamosis, e.g. for cancers or predisposition to cancers, or for drug screening.

Claim 6; Page 90-9: 182pp; English.

The haemopoletin receptor (RR) NR6; as a form of the novel HR NR6.

Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and 11/s derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for fary screening.

Claim 5; Page 84.87; 182pp; English.

The haemopoletin receptor (HR) NR6.2 is a form of the novel HR NR6. Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The nucleotide sequence was generated by a 5N RACE of brain cDNA using NR6 specific primers. NR6 is a novel Haemopoletin receptor (HR). Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapoutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       17-MAR-1999 (first entry)

CDNA encoding rat Zcytor5.

Zcytor5: cytckinin-like receptor; down-regulation; growth factor;
maintenance factor; thyroid; heart; skeletal muscle; cardiotrophin-1;
cardiac pathology; heart enlargement; Zcytor5 ligand; ss.

The present sequence encodes a protein designated Zcytor5, which is a cytokinin-like receptor. Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletel muscle for example to lessen the effect of cardiotrophin-1 on cardiac pathologies, so preventing heart enlargement. Zcytor5 could be used to detect cardiotrophin-1 in the blood, and to discover other possible Zcytor5 ligands. A probe and integrity of the Zcytor5 gene on chromosome 19. Antibodies and the and integrity of the Zcytor5 gene on chromosome 19. Antibodies and the therapeutically to andidy Ccytor5 ligand effects. Sequence 1724 BP; 350 A; 550 C; 500 G; 324 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1159 acacagetgtaateagececeaggaceceaecetteteateggeteetegeaageta 1218

CC Zcytor5, which is a cytokinin-like receptor. Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance of actor in thyroid, heart, and skeletal muscle for example to lessen the ceffect of cardiotrophin-1 on cardiac pathologies, so preventing heart calculargement. Zcytor5 could be used to detect cardiotrophin-1 in the blood, and to discover other possible Zcytor5 ligands. A probe comprising Zcytor5 DNA or RNA can be used to determine the presence cand integrity of the Zcytor5 gene on chromosome 19. Antibodies and the anti-idiotypic antibody could be used to purify Zcytor5 and the countility to modify Zcytor5 ligand effects.

CC therapeutically to modify Zcytor5 ligand effects.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; Page 63-66; 55pp; English.

The present sequence encodes a protein designated Zcytor5, which is a cytokinin-like receptor: Soluble Zcytor5 may be administered to down-regulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of Cardiotrophin-l on cardiac pathologies, so preventing heart enlargement. Zcytor5 could be used to detect cardiotrophin-l in the blood, and to discover other possible Zcytor5 ligands. A probe comprising Zcytor5 DNA or RNA can be used to determine the presence and integrity of the Zcytor5 gene on chromosome 19. Antibodies and the anti-idiotypic antibody could be used to purify Zcytor5 and therapeutically to modify Zcytor5 ligand effects.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         õ
                   New nucleic acid encoding U4 haematopoietin receptor superfamily
The new nucleic acid encoding U4 haematopoietin receptor superfamily
This is chain - potentially useful, e.g. for modulating cell proliferation
Tor immune response, for treating cancer and auto:immune disease
This is the nucleotide sequence encoding the human U4 protein from
the haematopoietin receptor superfamily, used in the method of the
Invention for the modulation of cell proliferation, or the immune
response. Transformed mammalian cells are used to produce recombinant
U4 protein. The U4 protein is used to screen for specific binding
agents, raise antibodies. It is also used as reagents for assays and
in pharmaceutical compositions which may modulate cell proliferation,
cell differentiation, and the immune system (e.g. for treating immune
cancer, and allergy).

The NR6 gene encodes a novel Haemopoietin receptor (HR). Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening. Sequence 1391 BP; 281 A; 459 C; 417 G; 234 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             e.g. neuronal cells

New polynucleotides encoding 25-hydroxyvitamin D 1-^a-hydroxylase -
useful to detect and treat vitamin D-related disorders
Example 4; Page 79-81; SSpp; English.
This invention describes novel 25-hydroxyvitamin D 1-alpha-hydroxylase
(1-alpha-OHase), a renal cytochrome P450 enzyme of the vitamin D
pathway, and polynucleotides encoding the enzyme from human, mouse and
rat tissue. Molecules of the invention are used to diagnose and treat
rat tissue. Molecules of the invention are used to diagnose and treat
vitamin D-related disorders, to produce vitamin D metabolites, and to
identify modulators of the enzyme expression. The invention describes
an animal cell transformed with the enzyme promoter which is used to
identify compounds which modulate the production of vitamin D in
patients with vitamin D endocrine disorders in the vitamin D in
hydroxylation pathway, the enzyme catalyses conversion of
bydroxylation pathway, the enzyme catalyses

maintenance or regeneration in an array of different cells and tissues in vito and in vivo. They can be present in therapeutics used for
                 vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening.

```
double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not and Eco RI sites of the modified pT7T3 vector. Library went through one round of normalization. Library constructed by Bento Soares and M. Fatima Bonaldo. " 156 c 108 g 66 t

14.50pc embryos [total RNA provided by Minoru Ko, Wayne State Univ., from 2 ]; double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library went through one round of normalization, and was constructed by Bento Soares and M. Farima Bonaldo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  gtgaccacggacccccacccgacgtgcacgtgagccgcgttgggggcctggaggaccag 3493
